

12.1 Adjacent and Vertical Angles p.504

Congruent angles: angles that have the same measure

(degrees)

donut vs. bagel

$$\angle ABC \cong \angle XYZ$$

\cong is the symbol for congruent

Adjacent angles: angles that have a common side and the same vertex; they are **next** to each other

$\angle abc$ is adjacent to $\angle cbd$
 B is the vertex \overrightarrow{BC} is the common side

Vertical angles: angles that are opposite each other (**across**)

from intersecting lines; they are **congruent**

(diagonal)

adjacent

$\angle 1$ and $\angle 2$

$\angle 4$ and $\angle 3$

$\angle 2$ and $\angle 3$

$\angle 1$ and $\angle 4$

vertical

$\angle 1$ and $\angle 3$

$\angle 2$ and $\angle 4$

Tell whether the angles are adjacent or vertical;
 then find the value of the variable.

1.

vertical

60°

2.

adjacent

50°

(together they are 90°)

3)

$$\frac{\text{vertical}}{115^\circ}$$

4)

$$\frac{\text{adjacent}}{57^\circ}$$

$$\frac{90}{-33} \\ \frac{57}{57}$$

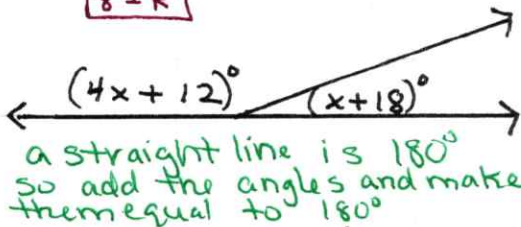

5)

$$\frac{\text{vertical}}{k = 8}$$

* we learned how to solve equations in chapter 3

6)

$$\frac{\text{adjacent}}{x = 30}$$

$$4x + 12 + x + 18 = 180 \\ 5x + 30 = 180 \\ -30 = -30 \\ 5x = 150 \\ \frac{5x}{5} = \frac{150}{5} \\ x = 30$$

7)

Construct vertical angles of 85° .

$$x = 30$$

Steps

① draw a line w/ a vertex

② use that line to measure an 85° angle

③ Then continue the line all the way through the vertex

④ The angles opposite each other are vertical and congruent (\cong)

⑤ label both
